

# VBr S AutoSew

## Fast Finishing of Vertical Louvres

The VBr S ensures the sewing of the top and bottom pockets of vertical blinds are 100% accurate and consistent. Any non skilled person who can be trained to thread the machine can easily operate the machine and finish 130 to 140 vertical louvres per hour.

### Standard Features

- Works with creased cut to length Louvres
- Ideal partner to VB1
- Straight stitch Brother Sewing machine
- Fully auto back tack locking stitch & thread trim
- Easy switch select for top or bottom pocket
- Sensors adjust automatically for any louvre width
- One touch paddles triggers start of sewing
- Operator does not guide or feed louvres
- Ergonomic fabric handling system
- Installation, set up and training provided
- PLC control system with fault finding codes

### Sewing Machine Type

Brother Industrial – 7220 B Needle Feed Direct Drive

A pre-creased louvre is fed in under a clear acrylic stop squaring with a pneumatic guide. A one touch paddle triggers start of louvre feed and sewing. An electronic eye controls the start and finishing of the sewing operation. The operator does not guide the louvre so during sewing he or she is moving the next louvre to be ready to feed.
